6. Anhang

6.1 Literaturverzeichnis

13. Ehrenstein MR, Neuberger MS, 1999 Deficiency in Msh2 affects the efficiency and local sequence specificity of immunoglobulin class-switch recombination: paralles with somatic hyermutations. EMBO J. 18-3484-3490

Immunoglobulin isotype switching is inhibited and somatic hypermutation perturbed in UNG-

37. Rajewsky, K 1996 Clonal selection and learning in the antibody system. Nature 381:751-
757

Dufourcq-Lagelouse R, Gennery A, Tezcan I, Ersoy F, Kayserili H, Ugatzio A, Brousse N,
Activation-induced cytidine deaminase (AID) deficiency causes the autosomal recessive form
of the hype-IgM Syndrome (HIGM2). Cell 102:565-575.

Siegrist CA, Lambert Hp, 2002 Genration of adult-like antibody avidity profiles after early-life
immunization with protein vaccines. Eur J Immunol 32:752-760

41. Schröder HW, Zhang L, Philips J 2001 Slow, programmed of the immunoglobulin
HCDR3 repertoire druring the thrid trimester of fetal life. Blood 98:2745-2751

42. Snapper CM, Paul WE, 1987 Interferon-gamma and B cell stimulatory factor-1
reciprocally regulate Ig isotype prodution. Science 236(4804):944-947

43. Speer CP, Gahr M, 2001 Pädiatrie. Springer-Verlag Berlin Heidelberg

44. Splawski JB, Jelinek DF, Lipsky P, 1991a Delineation of the functional capacity of human
neonatal lymphocytes. J Clin Invest 87:545:553

45. Splawski JB, Lipsky PE, 1991b Cytokine regulation of immunoglobulin secretionby

56. Xu J, Davis M 2000 Diversity in the CDR3 region of Vh is sufficient for most antibody specificities. Immunity 13: 37-45
57. Zemlin M, Bauer K 2001 The diversity of rearranged immunoglobulin heavy chain variable region genes in peripheral blood B cells of preterm infants is restricted by short third complementarity-determining regions but not by limited gene segment usage. Blood 97:1511-1513
